## CLAIMS

## What is claimed is:

- A die for forming patterns from a sheet of material, comprising:
  a substantially planar plate configured to be secured to a portable die cutting apparatus;
  at least one cutting edge protruding from a surface of said substantially planar plate a distance of about 0.015 inch to about 0.02 inch.
- 2. The die of claim 1, further comprising: at least one ejection element associated with said surface of said substantially planar plate.
- 3. The die of claim 2, wherein said at least one ejection element comprises at least one compressible, resilient member.
- 4. The die of claim 3, wherein said at least one compressible, resilient member comprises a foam.
- 5. The die of claim 1, wherein at least a portion of said at least one ejection element is positioned within a periphery defined by said at least one cutting edge.
- 6. The die of claim 1, wherein said substantially planar plate and said at least one cutting edge comprise the same material.
- 7. The die of claim 6, wherein said distance said at least one cutting edge protrudes from said surface of said substantially planar plate is greater than a thickness of said substantially planar plate.
- 8. The die of claim 1, wherein said substantially planar plate comprises at least one of a magnetic material and a material which is attractable to a magnetic field.

- 9. The die of claim 1, wherein said substantially planar plate comprises steel.
- 10. The die of claim 1, wherein said at least one cutting edge comprises steel.
- 11. The die of claim 1, wherein said substantially planar plate has a thickness of about 0.01 inch.
- 12. The die of claim 1, wherein, in combination, a thickness of said substantially planar plate and said distance said at least one cutting edge protrudes from said substantially planar plate are about 0.03 inch.
- 13. The die of claim 1, wherein at least one peripheral dimension of said substantially planar plate is at most about 2 inches.
- 14. The die of claim 13, wherein said substantially planar plate is rectangular in shape and has peripheral dimensions of at most about 2 inches by about 2 inches.
- 15. The die of claim 1, wherein at least one peripheral dimension of said substantially planar plate is about 2 inches.
- 16. The die of claim 15, wherein said substantially planar plate has peripheral dimensions of about 2 inches by about 2 inches.
- 17. The die of claim 1, wherein said substantially planar plate has dimensions which facilitate compact and portable storage thereof with a plurality of other similarly dimensioned dies.

- 18. A die for forming patterns from a sheet of material, comprising: a substantially planar plate;
- at least one cutting edge protruding a distance of about 0.015 inch to about 0.02 inch from a surface of said substantially planar plate and formed from the same material as said substantially planar plate.
- 19. The die of claim 18, further comprising: at least one ejection element associated with said surface of said substantially planar plate.
- 20. The die of claim 19, wherein said at least one ejection element comprises at least one compressible, resilient member.
- 21. The die of claim 20, wherein said at least one compressible, resilient member comprises a foam.
- 22. The die of claim 19, wherein at least a portion of said at least one ejection element is positioned within a periphery defined by said at least one cutting edge.
- 23. The die of claim 18, wherein said substantially planar plate comprises at least one of a magnetic material and a material which is attractable to a magnetic field.
- 24. The die of claim 18, wherein said substantially planar plate and said at least one cutting edge comprise steel.
  - 25. The die of claim 24, wherein said steel comprises spring steel.
- 26. The die of claim 18, wherein said at least one cutting edge protrudes from said surface of said substantially planar plate a distance that is about the same or greater than a thickness of the sheet of material

- 27. The die of claim 18, wherein said distance said at least one cutting edge protrudes from said surface of said substantially planar plate is greater than a thickness of said substantially planar plate.
- 28. The die of claim 18, wherein said substantially planar plate has a thickness of about 0.01 inch.
- 29. The die of claim 18, wherein, in combination, a thickness of said substantially planar plate and said distance said at least one cutting edge protrudes from said substantially planar plate are about 0.03 inch.
- 30. The die of claim 18, wherein at least one peripheral dimension of said substantially planar plate is at most about 2 inches.
- 31. The die of claim 30, wherein said substantially planar plate is rectangular in shape and has peripheral dimensions of at most about 2 inches by about 2 inches.
- 32. The die of claim 18, wherein at least one peripheral dimension of said substantially planar plate is about 2 inches.
- 33. The die of claim 32, wherein said substantially planar plate has peripheral dimensions of about 2 inches by about 2 inches.
- 34. The die of claim 18, wherein said substantially planar plate has dimensions which facilitate compact and portable storage thereof with a plurality of other similarly dimensioned dies.

35. The die of claim 18, wherein said substantially planar plate is configured to be secured to a portable die cutting apparatus.
